

Assignment: Writing a conclusion

ZF reveals world's most powerful ProAI supercomputer for advanced mobility solutions

This brings us to the end of the presentation. Remember what I said at the beginning of the presentation? Well, by now you should know why you should choose for the ZF ProAI supercomputer for advanced mobility solutions. We have proven that the ZF ProAI uses 66 percent more computer power and in the meantime, it consumes up to 70 percent less power. In this 66 percent increase in computer power, the ZF ProAI has the optimized capabilities for deep machine learning, these are an important basis for further advanced safety functions. In addition to these features the ZF ProAI can withstand extreme conditions, and has excellent protection against cyber threats. The results of this study indicate that the ZF ProAI is the best option for advanced mobility solutions. This study provide a deeper insight of how we can improve supercomputers with the newest technology.
