22 October 2022

For the attention of the Managing Partner Guillaume Truel

Dear Mr. Truel,

Application for the position of C# .NET Developer

I am writing in response to the recent vacancy for a C# .NET Developer on actiris.brussels.

Before my studies in a bachelor Applied Information Technology with specialization in Mobile & enterprise development, I have studied a graduate education in Programming. During that graduate, I found my passion for C#. During my education I have made a lot of console-Applications, REST-API's in ASP.NET, Web applications and so much more.

Besides my knowledge of programming and development, I also master the ability to work in an agile or Waterfall environment. In the past I have collaborated on projects which made use of the agile working method. At the time we worked in a scrum timespan of 1 week.

I also have interest in languages such as CSS3, HTML, JavaScript, PHP and MySQL. I have gained experience within these languages by having worked with several firms to solve certain organizational and administrative problems. At the moment, I am creating an Invoicing- & payments system for my brother's company. In this project I am using different APIs like Mollie, VIES (VAT number validation).

Thank you for taking time to consider my application. I am available for an interview at your convenience.

Yours sincerely,

Alexander Bal
